

METHOD, APPARATUS, MEDIA AND SIGNALS FOR SIMPLIFYING A PROGRAM LISTING

ABSTRACT

A method, apparatus computer readable medium and signals for simplifying a program listing are disclosed. Generally, each involves receiving an identification of a portion of a program listing to be hidden, receiving input indicating that the portion is to be hidden, and causing a symbol to replace the portion of the program listing in response to the identification and the input indicating the portion is to be hidden. This functionality may be imparted to a text editor normally used to produce a program listing, or may be provided as an enhancement to a text editor.
